Consumers Remain Upbeat About Buying, Selling Homes

It may be good news for those skinny housing inventories, homebuyers are allegedly confronting that increasing numbers of homeowners think **now is a good time to sell**. Fannie Mae says net positive responses to that question on its June National Housing Survey (NHS) increased by 7 points, reaching a new survey high of 39 percent. Those responses helped drive Fannie Mae's Home Purchase Sentiment Index (HPSI) **up by 2.1** percentage points to 88.3, tying last February's all-time high for the index. The HPSI is up 5.1 percentage points compared with the same time last year.

Four of the six HPSI components increased in June. The net of those who think it is a good time to buy a home increased by 3 percentage points to 30, but the gap between the "good time to buy" and the "good time to sell" responses widened again. Fannie Mae says this "continues to indicate a potential sellers' market."

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	7.09%	+0.07	0.00
15 Yr. Fixed	6.56%	+0.03	0.00

Recent Housing Data

		Value	Change
Mortgage Apps	May 15	198.1	+0.51%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%

		Value	Change
Builder Confidence	Mar	51	+6.25%

Survey respondents also expressed greater **belief that mortgage rates will go down** over the next 12 months. That component increased by 3 percentage points, but the net remains deeply in the negative.

The fourth component which went up when compared to the May survey was consumer opinions regarding further home price increases. The net share of respondents who think they will go up over the next 12 months increased by 6 percentage points to 46 percent.

"The June HPSI reading matches the previous record set in February and reflects the trend toward a sellers' market that respondents indicated last month," said Doug Duncan, senior vice president and chief economist at Fannie Mae. "Consumers are also growing more optimistic about their ability to get a mortgage, and lenders expect **credit standards to ease further** going forward, as shown in our Mortgage Lender Sentiment Survey. While consumer optimism on this metric is as high as we've seen in the survey's seven-year history, it's worth noting that this record is relative to the fairly tight standards in place post-crisis when we started collecting National Housing Survey data. Nevertheless, in the face of very tight housing supply, easing credit standards may fail to have the desired effect and could have the unintended consequence of fueling further house price increases."

The two components that **lost ground compared to May** were the net share of consumers who say their household income had increased compared to last year and those who said they were confident they would not lose their jobs. Positive responses to the income question dropped 1 point to a net of 17 percent and the jobs question was down 5 points but was still high at a net of 66 percent.

The HPSI distills information about consumers' home purchase sentiment from the National Housing Survey into a single number that reflects current views and forward-looking expectations of housing market conditions. The NHS is conducted monthly by telephone among 1,000 consumers, both homeowners and renters. Respondents are asked more than 100 questions used to track attitudinal shifts, six of which are used to construct the HPSI. The June survey was conducted between the first and 25th of the month, with most respondents contacted during the first two weeks of that period.

Lending on Tap in Every State

Buyers in all 50 states trust my team to close their loans simply and on time.

Our team works hard to make your loan process appear simple. Even when you're already pre-approved with a lender, you'll benefit from talking with us.

Where are you in your process? Where are you trying to go? I'll share with you how we'll be a part of that journey.
